

Appendix 1

Toxic use reduction (TUR) activities in Canada -- Governments

Toxics use reduction (TUR) activities in Canada -- Governments

This list of government toxics use reduction activities was compiled during an environmental scan. It was done during March and April, 2009. (For details about the scan, see the related report.)

We have done our best to be accurate and comprehensive. However, we may have missed a few relevant programs or departments. So consider this a good start -- for information and conversations about what Canadian governments are doing in the way of TUR.

To make it easier to use, the list is sub-divided into charts for national/federal and provincial/territorial charts. The turquoise highlights indicate programs or departments now doing TUR work; the others show where there are opportunities to use the law, programs, etc. to do more.

1. National/federal focus

Toxics use reduction (TUR) activities in Canada --

3.1 People and organisations -- National/federal focus

This list of toxics use reduction activities was compiled during an environmental scan. It was done between March and May, 2009. (For details about the scan, see the related report.)

We have done our best to be accurate and comprehensive. However, we may have missed a few relevant programs or organizations. So consider this a good start -- for information and conversations about what Canadian organizations are doing in

the way of TUR. This list deals with national or federally-focused non-governmental organisations. There are separate ones for governments, and for non-governmental groups and activities by province and territory.

National Network on Environments and Women's Health (NNEWH)	Dayna N. Scott, Executive Director	5021 TEL Building, York University 4700 Keele St, Toronto, Ontario M3J 1P3	416-736-5941 F: 416-736-5986 Scott: 416-736-5721	http://www.nnewh.org/ Women and Health Protection: http://www.whp-apsf.ca/ E-mail: nnewh1(at)yorku.ca; DScott(at)osgoode.yorku.ca	One Centres of Excellence for Women's Health, funded by Health Canada. Recently included Women and Health Protection group. Sponsors research on effects of environmental exposures to women (e.g., chemicals and water quality issues). Chemicals projects focus on health effects of exposures from contact with air, water, soils and dusts, from drinking water and food, and from using products containing biologically active chemicals.	Understanding conditions and diseases that are unique to/more prevalent in women, affect women differently, and are becoming more common for women. Improved health of women through research about social, cultural and environmental determinants of women's health, policy and action responsive to Canadian women's needs.	Hormones, water and reproductive health: examining gendered effect of chronic low chemical exposures; developing priorities for research. Chemicals: current topics include "modernising" the Hazardous Products Act, effects of chronic low-level pollution in Sarnia, and health effects of production and everyday use of products like plastics.		Advisory Board has representatives from government, community and university. Toxics use reduction (TUR) activities in Canada -- People and organisations

3.3 Provincial/Territorial focus - British Columbia

Note: For a variety of reasons, this list does not properly reflect the activities of First Nations who are dealing with air, land and water pollution that affects the health of their peoples, the wildlife in their communities and the fish in their waters.

Mines, particularly abandoned ones, are key sources of contamination and controversy. First Nations affected, advocating

for changes and/or opposing new operations include Tl'azt'en, Takla Lake, Nak'azdli (all three are part of [Carrier Sekani Tribal Council](#)), Xeni Gwet'in (aka Nemiah), Wet'suwet'en. Hydro project flooding also has led to toxic contaminants affecting communities such as Tsay Kay Dene, Kwadacha and Cheslatta.

Many of these First Nations have staff or consultants working on these issues. However, it was not possible to have proper conversations with them or others representing the First Nations during the time available for this scan. Some sense of the issues involved can be found in documents from the [First Nations Environmental Health Innovation Network](#) and other Aboriginal health organisations listed in the national category of people and organisations.

Saskatchewan's Green Directory		c/o Saskatchewan Eco-Network		http://www.saskatchewangreendirectory.org/ E-mail: via website.	Saskatchewan Eco-Network project. Lists products meeting criteria . First phase for those renovating homes. Second phase will list green building materials product and service suppliers. Topics: energy and water efficiency, renewable energy, building materials, transportation, some consumer products (e.g., furniture, baby care, household and hand cleaners)	Provide lists of "green" products available in province and beyond.	See lists.		Saskatchewan Research Council Ministry of Environment.	Business Chemicals Environment Food Green building Green purchasing Health Household products NGO

Toxics use reduction (TUR) activities in Canada -- People and organisations

3.13 Provincial/Territorial focus - Yukon Territory

Organisation	Contact person(s)	Address	Phone	Website and/or e-mail	Description	Purpose	TUR/cancer prevention activity/ies	Members	Work(ed) with/Member of (examples)	Keywords
Arctic Borderlands Ecological Knowledge Co-op	Lisa Taylor, Admin. Co-ordinator	91780 Alaska Highway Whitehorse, Yukon Y1A 5B7	867-334-2250 F: 867-393-7970	http://www.taiga.net/coop/ E-mail: borderlands@taiga.net	Non-profit society monitoring climate change, contaminants and regional development in range of Porcupine Caribou Herd and adjacent Mackenzie Delta area in NWT, Yukon & Alaska. Funding and support from Canadian, territorial and U.S. government agencies, co-management boards, and Inuvialuit and First Nation councils.	Bringing together science and local and traditional knowledge to track, synthesise and communicate indicators of ecosystem change. Improve communications and understanding about ecosystem knowledge and management. Foster capacity-building and training opportunities for above goals in communities.	Indicators used to track ecosystem changes. Reports and posters about annual interviews with local experts to collect observations about fish, berries, caribou, unusual animal sightings, weather conditions and other aspects of environment and communities. Arctic borderlands database of information sources includes reports, file and data sets and maps in informal, annotated listing with information about who to contact or where information is located.		Wildlife Management Advisory Council (North Slope)	Chemicals Environment First Nations Health Inuit NGO Research Surveillance Training/ workshops Wildlife

Yukon Conservation Society (YCS)	Karen Baltgailis, Executive Director	302 Hawkins St. Whitehorse, Yukon Y1A 1X6	867-668-5678 F: 867-668-6637	http://www.yukonconservation.org E-mail: ycs@ycs.yk.ca	Grassroots non-profit started in 1968. Educates, advocates and does research about Yukon environmental issues. Public watch-dog about environmental regulation of mining, forest management, energy efficiency and land use planning. Plays important role in ensuring adequate protection for wild lands representing Yukon's biodiversity. Work with Yukon First Nations, land claims bodies, stakeholders and communities on issues of mutual interest.	Pursue ecosystem well-being throughout Yukon and beyond, recognizing human well-being ultimately depends on fully functioning healthy ecosystems.	Working to: • reduce and eventually eliminate diesel generation of electricity • get moratorium on oil, gas and uranium exploration and development in Yukon • participate in implementation of new Placer Regime, to ensure effective monitoring and adaptive management • support First Nations/communities facing mining developments to protect environment, traditional uses and communities. * Notes about the keywords

It is always difficult to quantify information that is obtained using qualitative methods. However, the trends apparent in these charts show how it can be useful to do this. There are caveats in these circumstances.

Aside from the explanations about specific words or phrases, please note that these keywords were attributed to specific listings based on information obtained in conversations and/or internet searches. Quebec listings likely are under-represented in each category, since the searches were done mostly in English. There likely are other reasons that the tables underestimate the number of activities in a category, particularly since the scan was looking for some specific words or phrases that the groups or organisations do not use themselves. Also, some organisations or groups may be involved on their own, or with others, in other activities; however, the activities may be minor aspects of their mandate, or hidden within website materials that were not easily accessible.

Categories usually were assigned based on what the organisations, groups, etc. use themselves. (If not, the interpretation explains how this was done.) For example, "toxics use reduction" is a relatively-unknown term. For the purposes of this scan, it seemed

important to know where it is used, even if the activities described are fairly obviously reducing the use of toxic substances.

The words and phrases for the categories were interpreted this way:

Academic: university-based

Air quality: had to be used to describe activities or interests.

Business: a commercial enterprise, business association or listing includes case studies of business activities.

Cancer: used to describe activities or interests, except for asbestos, where it was assumed the disease was a concern.

Chemicals: used or there were references to specific chemical substances (see the definition in the text), including pesticides.

Children: used to describe a focus of activities.

Coalition: the group or organisation described itself this way.

Environmental: appeared in describing any of the organisation or group's activities.

Environmental illness: used by the group or organisation, and includes multiple chemical sensitivities or environmental sensitivities

First Nations, Inuit, Metis: represents Aboriginal peoples, studies their environmental or occupational health issues or work

with the group or organisation in an obvious way.

Food: named by the group or organisation.

Green building: named as the kind of activity, unless other words were used but the intention of avoiding the use of at least some toxic substances was very clear.

Green chemistry: self-description, except for those developing substitutes for chemicals who did not use the term explicitly.

Green jobs: explicitly named as such.

Green purchasing: also called green procurement, was interpreted more broadly if the intention was very clear.

Health: had to be mentioned explicitly.

Health care: involved in the sector as employers, workers or related associations.

Household products: covers cosmetics, lawn and garden and general consumer items.

Labour: trade unions, their federations or central "house of labour", or they are explicitly involved in the group or organisation

Mining: named as the focus of an activity, including contaminants from planned, current or closed/ abandoned facilities.

NGO: non-governmental organisations, broadly interpreted when descriptions seemed appropriate and were not other categories.

Network: self-description.

Occupational: work-related health outcomes or hazards are the focus of an activity.

Pesticides and alternatives: cosmetic (including bans) and agriculture uses, as well as providing information about alternate products and/or methods to care for lawns, gardens and crops.

Pollution prevention: the organisation or group had to appear in one of the pollution prevention case studies or use the term itself to describe an activity

Research: named as a focus of activity or used for academic listings.

Right-to-know: refers to campaigns using the term, and activities about ingredient labelling and workplace health and safety rights.

Schools: activities include schools in some way.

Smoking: explicitly named, but likely done by many others in the past and/or less often now, given public health bans.

Surveillance: applies to measurements involving the monitoring of people, their health and/or substances in the air, water, soil or animals; includes studies using the results.

Toxics use reduction: term used explicitly as is or in a form such as "reduce use of toxics"

Training/workshops: hold workshops or seminars for members and/or others and/or provide training, including university classes.

Waste: explicitly used, whether referring to materials in water, soil or products.

Water quality: named as a focus of activity

Workplaces: activity appears to take place in, or involve, a workplace.

Appendix 5

Sample TUR workplace policies and contract clauses

Sample TUR workplace policies and contract clauses

1. Sample policies

BC - Langley School District: 35 , Canada
Environmental Management of Facilities and Grounds
Added February 25, 2008

School District: 35 Langley

Policy Subject: USE OF ENVIRONMENTALLY FRIENDLY MATERIALS

Date Passed : 2007-02-13

0000-00-00

Description: USE OF ENVIRONMENTALLY FRIENDLY MATERIALS
Policy No. 4010 (A)

Date Approved: February 13, 2007

Date Amended:

The Board, is committed to undertaking initiatives which support environmentally sound practices, and promote the health and safety for students and employees in schools. As part of these commitments, the District will endeavour to reduce and/or eliminate the use of toxic products in school premises.

A Product Review Committee will assess products for toxicity, identify proper handling of toxic materials and where possible, will source non-toxic equivalent products.

The District will make all reasonable efforts to purchase non-toxic materials, products containing recycled materials and materials which, when ultimately disposed, will minimize or eliminate adverse effects on the environment.

REGULATIONS

1. A Product Review Committee will be established to:

a. Assess current products/practices and review alternative products/practices that would eliminate or reduce the use of toxic materials within the Langley School District.

b. Maintain a list of environmentally and health friendly products that will be used exclusively within the District. The District will eliminate the use of household chemicals, products that are of commercial grade and all those that are not subject to Material Safety Data sheet compliance.

c. Promote the use of biodegradable and environmentally friendly products that will not result in the generation of hazardous waste.

2. The School District will maintain a procurement system for school products, which will ensure the purchase of non-toxic or less toxic products that reduce staff and student exposure; and in the contract bidding process will request the use of non-toxic materials.

3. The School District will maintain a system of disposal for school products that is safe and environmentally responsible.

4. The School District will ensure there is employee and student awareness regarding the use of toxic products/ materials and the prevention of pollution.

5. The School District will ensure that the design for any new construction or renovation of school facilities incorporates the use of environmentally sound materials and building systems.

6. The School District will ensure that reduce, reuse, and recycling programs are maintained throughout all schools and buildings.

2. Sample contract language

CUPE Locals have successfully implemented programs to replace toxic cleaners with green cleaning products, particularly in schools.

For example, CUPE 379, representing non-teaching staff in Burnaby, B.C. schools, with the help of British Columbia's Labour Environmental Alliance Society, created a substitution program for cleaning products. The next step with a program like this is to move it from policy to be embedded in collective agreements.

For example, CUPE recently bargained a committee to review current cleaning practices and promote green alternatives as part of its settlement in the Ontario school boards sector. The following green contract language is the result of this settlement:

Two CUPE representatives will join the Green Clean Working Group made up of Ministry of Education staff and volunteer boards representing procurement, school board officials and facilities management staff.

The Green Clean initiative's goal is "to minimize or potentially eliminate the use of non-green cleaning products in schools across the province resulting in an improved outdoor ecosystem to support student learning and a healthy workplace environment."

The Green Clean initiative's objective is "to create a comprehensive green clean program for Ontario's school boards that is easy for boards to implement and addresses the information needs of all identified audiences."

The Green Clean Working Group will liaise with the successful candidate of a Request for Proposal for the creation of a comprehensive Green Clean Program, to review the research findings, communications products and the design, implementation and evaluation of green clean programs for schools.
