## Appendix 4.3

### Keywords explained

It is always difficult to quantify information that is obtained using qualitative methods. However, the trends apparent in these charts show how it can be useful to do this. There are caveats in these circumstances.

Aside from the explanations about specific words or phrases, please note that these keywords were attributed to specific listings based on information obtained in conversations and/or internet searches. Quebec listings likely are under-represented in each category, since the searches were done mostly in English. There likely are other reasons that the tables under-estimate the number of activities in a category, particularly since the scan was looking for some specific words or phrases that the groups or organisations do not use themselves. Also, some organisations or groups may be involved on their own, or with others, in other activities; however, the activities may be minor aspects of their mandate, or hidden within website materials that were not easily accessible.

Categories usually were assigned based on what the organisations, groups, etc. use themselves. (If not, the interpretation explains how this was done.) For example, “toxics use reduction” is a relatively-unknown term. For the purposes of this scan, it seemed important to know where it is used, even if the activities described are fairly obviously reducing the use of toxic substances.

The words and phrases for the categories were interpreted this way:

**Academic:** based in a university or college, or associated with one.

**Air quality:** used to describe activities or interests, or can reasonably be inferred from descriptions.

**Business:** a commercial enterprise, business association or listing includes case studies of business activities.

**Cancer:** used to describe activities or interests, except for asbestos, where it was assumed the disease was a concern.

**Chemicals:** used or there were references to specific chemical substances (see the definition in the text), including pesticides.

**Children:** used to describe a focus of activities.

**Coalition:** the group or organisation described itself this way.

**Environmental:** appeared in describing any of the organisation or group’s activities.

**Environmental illness:** used by the group or organisation, and includes multiple chemical sensitivities or environmental sensitivities.

**First Nations, Inuit, Metis:** represents Aboriginal peoples, studies their environmental or occupational health issues or work with the group or organisation in an obvious way.

**Food:** named by the group or organisation.

**Green building:** named as the kind of activity, unless other words were used but the intention of avoiding the use of at least some toxic substances was very clear.

**Green chemistry:** self-description, except for those developing substitutes for chemicals who did not use the term explicitly.

**Green jobs:** explicitly named as such.

**Green purchasing:** also called green procurement, was interpreted more broadly if the intention was very clear.

**Health:** had to be mentioned explicitly.

**Health care:** involved in the sector as employers, workers or related associations.

**Household products:** covers cosmetics, lawn and garden and general consumer items.

**Labour:** trade unions, their federations or central “house of labour”, or they are explicitly involved in the group or organisation.

**Mining:** named as the focus of an activity, including contaminants from planned, current or closed/ abandoned facilities.

**NGO:** non-governmental organisations, broadly interpreted when descriptions seemed appropriate and were not other categories.

**Network:** self-description.

**Occupational:** work-related health outcomes or hazards are the focus of an activity.

**Pesticides and alternatives:** cosmetic (including bans) and agriculture uses, as well as providing information about alternate products and/or methods to care for lawns, gardens and crops.

**Pollution prevention:** the organisation or group had to appear in one of the pollution prevention case studies or use the term itself to describe an activity.

**Research:** named as a focus of activity or used for academic listings.

**Right-to-know:** refers to campaigns using the term, and activities about ingredient labelling and workplace health and safety rights.

**Schools:** activities include schools in some way.

**Smoking:** explicitly named, but likely done by many others in the past and/or less often now, given public health bans.

**Surveillance:** applies to measurements involving the monitoring of people, their health and/or substances in the air, water, soil or animals; includes studies using the results.

**Toxics use reduction:** term used explicitly as is or in a form such as “reduce use of toxics”.

**Training/workshops:** hold workshops or seminars for members and/or others and/or provide training, including post-secondary school classes or training.

**Waste:** explicitly used, whether referring to materials in water, soil or products.

**Water quality:** named as a focus of activity.

**Workplaces:** activity appears to take place in, or involve, a workplace.
